

Abstract

Manage your role hierarchy with ease! Now you can drag and drop your way through any hierarchy modifications. Draggin' Role is a free application that allows you to view and manipulate users AND roles from a single Custom Tab.

Description

Draggin' Role is a utility any administrator will appreciate. Appropriately named, Draggin' Role allows an administrator (or delegated administrator) to drag and drop users from one role to another, and to drag and drop roles around the hierarchy.

Drag and drop features aside, this is a valuable tool simply because it combines the 'tree view' of the role hierarchy with customizable and collapsible user lists assigned to each role.

Upon pressing the "Customize" button, you are presented with a wizard which will allow you to customize several settings and choose which user fields are visible and what order they show up in. You can then sort the users showing up within each role by a particular field of your choice.

Highlights

Name	Description	Type
Draggin' Role Web Tab	<p>All the functionality of Draggin' Role is accessed via a single Custom Tab. This tab invokes a single Custom S-Control which makes the magic happen via the salesforce.com supported AJAX toolkit 8.0.</p> <p>Allowing delegated administrators to utilize Draggin' Role is as simple as allowing their profile to view the "Roles" Custom Tab. All predetermined delegated administration security permissions are then still in effect.</p>	◆ ☒

 ≡ = Plug-In, ✕ = Composite Component

Features & Benefits

- **Drag and drop users AND roles around the hierarchy:** You can move users from one role to another, and modify the parent role of any role through drag and drop operations. Changes are made in real time.
- **Combines the convenience of the 'tree view' with the flexibility of 'user views':** Now you can truly inspect your role hierarchy and the users in it all in one screen.
- **Choose your settings:** You can choose to view active users, inactive, or both; choose to view only a particular branch of the hierarchy; toggle warning messages on or off; select which user fields show up and in what order all through a simple two-step wizard.
- **Remembers your settings:** If you have cookies enabled, Draggin' Role will automatically recall and apply the settings from your last visit.
